DETAILED ACTION

1. It would be of great assistance to the Office if all incoming papers pertaining to a filed application carried the following items:

1. Application number (checked for accuracy, including series code and serial no.).
2. Group art unit number (copied from most recent Office communication).
3. Filing date.
4. Name of the examiner who prepared the most recent Office action.
5. Title of invention.
6. Confirmation number (See MPEP § 503).

Claim Objections

2. Claims 24 and 32 are objected to because of the following informalities:

In claim 24 line 5, "**the input**" should be deleted and **---the convolutional coder---** should be added.

In claim 24, line 6, "**input**" should be deleted and **---convolutionally coded---** should be added.

In claim 24, line 7, the word **—fast—** should be added after the word inverse.

In claim 24, line 11, the word "**outputs**" should be deleted and the word **----values---** should be added.

In claim 32, line 6, the word **—fast---** should be added after the word inverse.

Appropriate correction is required.

Specification

3. The disclosure is objected to because of the following informalities: in the specification page 24 and page 25 "**rate 5/4 convolutional coder**" should be **----rate**

Art Unit: 2637

4/5 convolutional coder. In specification page 25, line 30, the word "**Inverse**" should be deleted and the word **---Fast---** should be added.

Appropriate correction is required.

Allowable Subject Matter

4. This application is in condition for allowance except for the following formal matters:

See above objections.

Prosecution on the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

A shortened statutory period for reply to this action is set to expire **TWO MONTHS** from the mailing date of this letter.

Allowable Subject Matter

5. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record fails to anticipate or render obvious the claimed an apparatus for transmitting data on a fiber channel the apparatus comprising: a convolutional coder *in combination with a plurality of symbol encoders that accept a portion of the signal received by convolutional coder, and encode the convolutionally coded into a symbol (S) and a complex conjugate of the symbol (S*); a 32-inverse fast Fourier Transformer that receives S and S* signals and provides a digital output signals; a plurality of D/A converters for accepting the digital outputs from the 32-IFFT and for converting the accepted digital value to an analog value; and an analog multiplexer that samples the analog outputs from the plurality of digital to analog converters and*

combines them into an interleaved signal having successive values representative of the output of the plurality of digital to analog converters in the manner and complexity explicitly claimed in claim 24; and

an apparatus for receiving data on a fiber channel the apparatus comprising: an input that accepts an interleaved signal comprising a plurality of discrete successive values; a plurality of sample and hold circuits that accept the interleaved signal and extract a sample comprising a discrete value; a plurality of analog to digital converters that convert the discrete values from the plurality of sample and hold circuits to a plurality of digital values; *in combination with a 32 -Fast Fourier Transform circuit that accepts said plurality of values from the plurality of analog to digital converters and converts said values into symbols (S) and complex conjugates of the symbols (S*); A plurality of trellis decoders that accept said symbols (S) and said complex conjugates of the symbols (S*) and produced an uncoded output; and an interface which accepts the outputs of said plurality of trellis decoders and combines them into a digital signal in the manner and complexity explicitly claimed in claim 25.*

Conclusion

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US 6,249,543 and 4,914,699 are cited to show an apparatus comprising convolutional coder, symbol encoder, IFFT and D/A.
